

Proof of CLICK

New Generation of Forms
that actually generates
feedback

Our approach

- 1 Problem
- 2 Solution
- 3 Proof of concept
- 4 SUI integration
- 5 Impact & future
- 6 Business plan

01

Problem

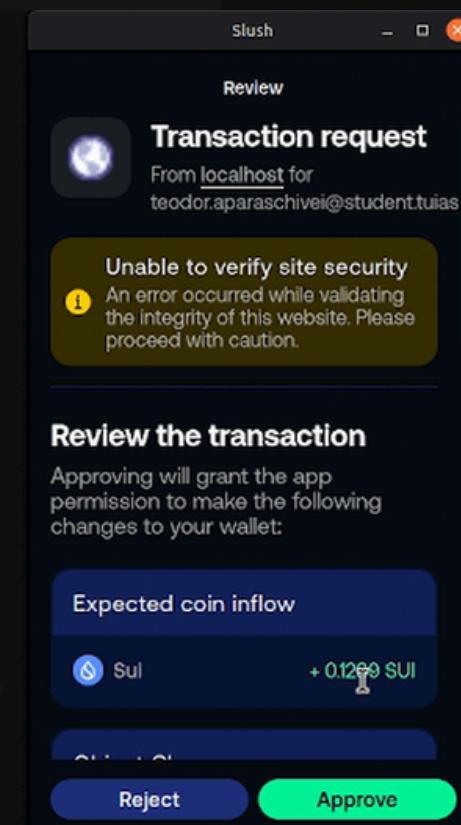

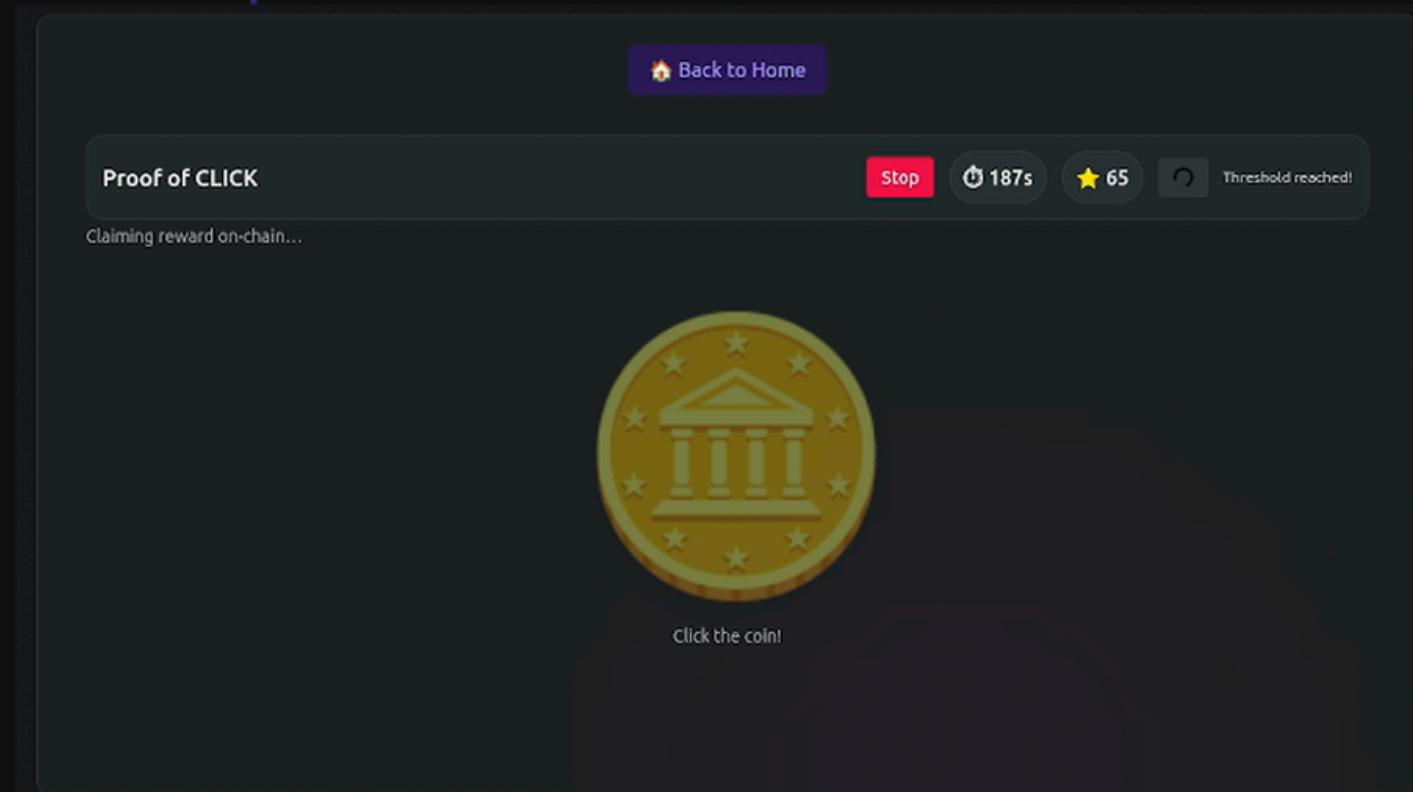

- Difficulty in measuring users' knowledge on specific provided topics.
- Organizations do not have a fast and affordable way to collect user feedback.
- For example, around 80% of users typically do not respond to standard online forms.

02

Solution

- Instant rewards for answering questions, without requiring payment details.
- Gamification of the quiz process.
- A smooth and enjoyable user experience throughout the process.

03 Proof of Concept

Proof of CLICK 🎮

Question 5 of 10

18s

What does “scalability” mean in a blockchain context?

- The ability to increase block size manually
- The ability to hide transactions
- The ability to mine faster
- The ability to handle more users and transactions efficiently

✓ Correct! +18 points (18s remaining)

Next Question

A screenshot of a quiz interface titled "Proof of CLICK 🎮". It shows "Question 5 of 10" with a timer at "18s". The question is "What does ‘scalability’ mean in a blockchain context?". Four options are listed:

- The ability to increase block size manually
- The ability to hide transactions
- The ability to mine faster
- The ability to handle more users and transactions efficiently

A green checkmark and the text "✓ Correct! +18 points (18s remaining)" are displayed. A "Next Question" button is at the bottom.

04

SUI integration

- The user's wallet acts as their identity.
- Earnings are validated through on-chain transactions.
- Secure logic implemented using Move with (public key ,private key).
- Blockchain allows us to validate user earnings in a transparent, secure, and verifiable way, without relying on a central server.

05

Impact & future

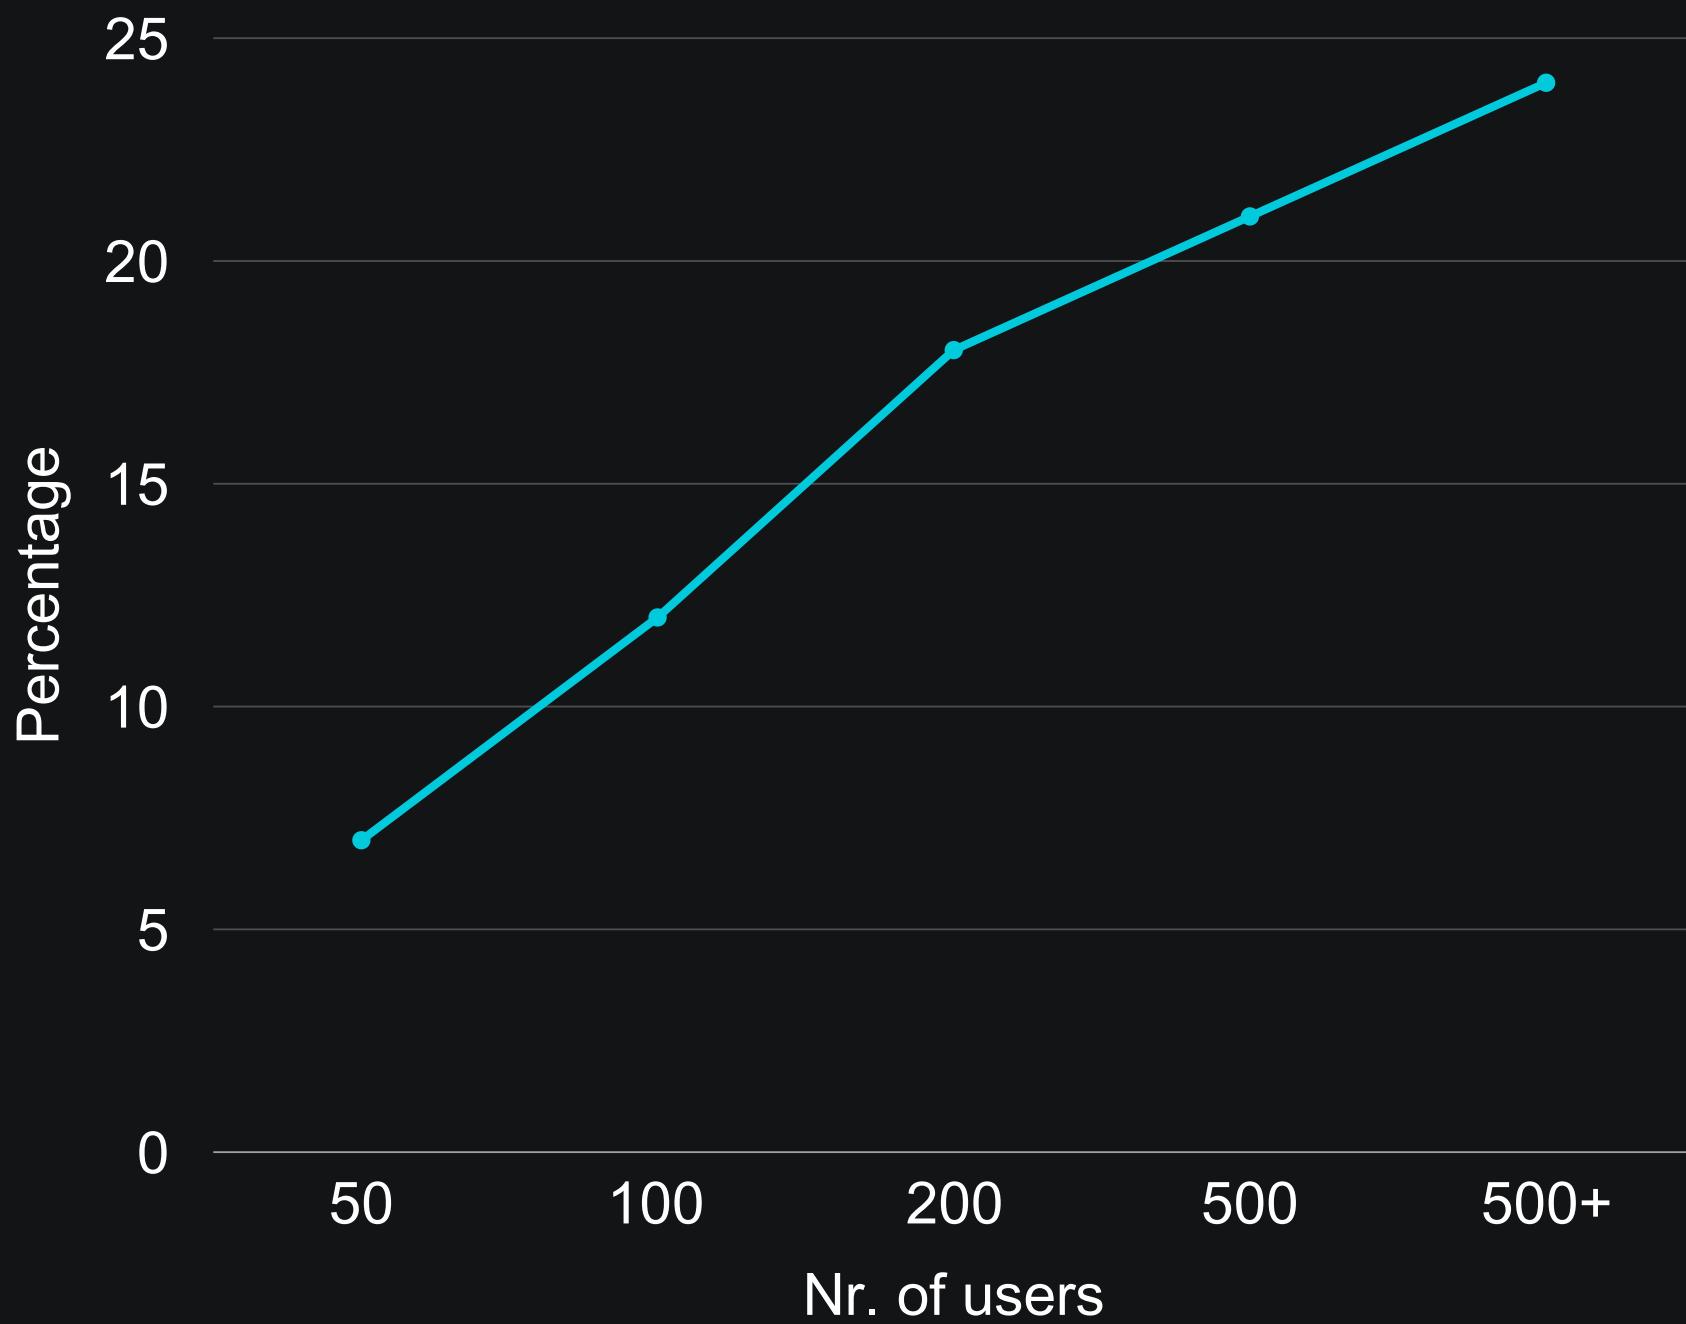

- Business integration
- Advanced dashboard for HR and management
- Real-time quizzes with results during workshops and conferences
- Our goal is for the app to become a new de facto tool for getting user feedback

06 Business plan

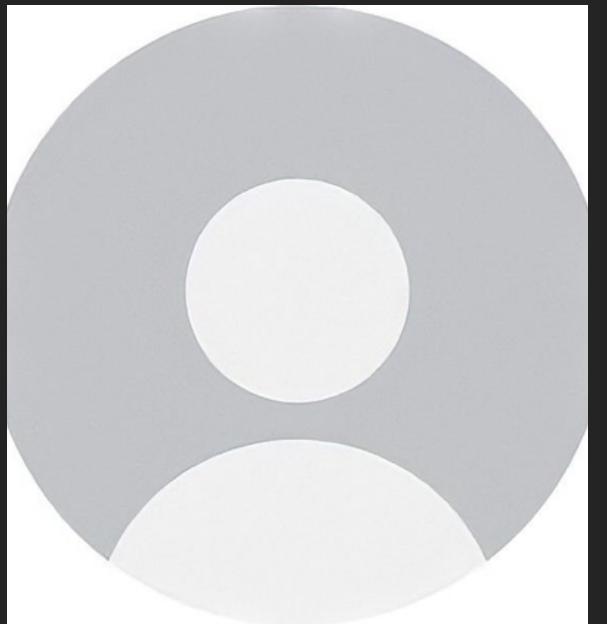

B2B approach

The business monetization model is based on partnering with organizations that provide:

- SUI tokens, for rewarding users and covering our platform's commission;
- question sets that are distributed to users.
